Currently, tabbing from field to field in TD follows the order of the Columns in the Layout Order – as per figure above. Sections are great but they don't allow for situations where you'd like to keep tabbing down the page – as per figure below.

The setup at the moment is limited to a section being able to be in the same row as another section, rather than in one of the 4 widths that has been added in the new forms structure (for the Column format).

Your feedback is appreciated.
